DIE CASTING

LOW PRESSURE CASTING

GRAVITY CASTING

## The universal measurement system for machines of all manufacturers

### CQC Cast Quality Control

This universal measurement and monitoring system offers comprehensive analysis possibilities and maximum flexibility, regardless of the make or age of the machine. User-friendly software and state-of-the-art hardware components make it possible for our customers to meet the ever-increasing demands of the die-casting industry.

### Sensors

The accuracy of the process data measuring system is one aspect. The other aspect is that sensors have to deliver the corresponding data to the measuring system. The more precise they are, the more accurately they can be evaluated by the system. Our sensors represent our own tried-and-tested developments and are subject to continuous further refinement in collaboration with leading producers. They are therefore ideally suited for use in the die casting process.
